

KAS Lawn Care Program Comparison

Lawn Service

**KAS Lawn
Gold Plan**

**KAS Lawn
Silver Plan**

Spring Feeding (*Early Spring*)

Green up with our early spring application. A careful lawn examination and an application of a slow release fertilizer and crabgrass pre-emergent provides the perfect balance to encourage growth, prevent crabgrass before it germinates to promote a healthy green lawn.

This is a great time to have your soil sampled so we can identify any hidden issues.

Broadleaf Weed Control (*Late Spring*)

Liquid weed killer is blanket applied to your entire lawn to keep the area weed-free.

Early Summer Fertilization (*Early Summer*)

A slow-release fertilizer including micro-nutrients is applied to promote new growth in preparation for the summer months. Also includes a weed spot treatment if necessary.

Mid-Summer Fertilization (*Mid-Summer*)

A new round of slow-release fertilizer is applied to maintain lawn health. Also includes a weed spot treatment if necessary.

Broadleaf Weed Control (*Early Fall*)

A final liquid weed killer is blanket applied to your entire lawn to kill any weeds that have germinated before winter weather sets in.

Fall Fertilization (*Fall*)

A well-balanced fertilizer is applied to keep your lawn green and lush during cooler months.

If you did not utilize our soil sampling and analysis during the spring, this is a great time to get them done. This gives us a great opportunity to fine tune your final fertilizer application and begin to make any soil health adjustment that may be needed.

Late-Fall Fertilization (*Late Fall*)

Fertilizers high in potassium are applied to strengthen your grass and keep it healthy during the cold winter months.
